

Atlantic Close Coupled Cistern

Product Code

ATLCIS

Features and Benefits

- Elegant Art Deco styling
- Manufactured in the UK
- Fired Earth branded
- Only the highest quality clay and glazes used
- Hand finished
- Every piece rigorously inspected at every stage of the manufacturing process
- Stocked product so always readily available
- **CONFORMS TO CE REGULATIONS**

FAQ's

- (Q) Is it simple to install?
(A) Yes but we always suggest that a professional installer is used.
- (Q) Are cistern workings supplied?
(A) Yes, a drop valve, single flush (6 Litres).
- (Q) Where is the water inlet positioned?
(A) On the left hand side only.
- (Q) How do I clean and maintain the product?
(A) Refer to maintenance section.

Toilet Instruction Guide

Important Information:

Please check the products for transport damage and that contents are complete before installation.

Consult a qualified plumber if you have any problems installing this product.

Complaints made following installation regarding the above cannot be accepted.

Atlantic Close Coupled Cistern

Toilet Installation Guide

Thank you for purchasing this product.

These instructions relate to our close coupled, high level and low level toilets.

Before you start check you have the necessary tools for installation.

Before you begin:

Always handle our products with care and attention.

Ceramic products are brittle, and may chip, crack or break if not handled carefully. Broken ceramic is extremely sharp.

Take care not to over tighten screws and fittings. Over tightening may lead to breaks or chips in the ceramic.

Before installing the product, please inspect for damage incurred during transport. FIRED EARTH can not take responsibility for damaged products after or during their installation.

We recommend that the guidance of a qualified plumber is sought throughout the installation process.

Always observe the plumbing and building regulations in the area the product is being installed in.

FIRED EARTH reserves the right to amend the design of its products without notice, as specified in the company catalogue.

Tools Required

The following tools are necessary for the installation of this product.

We would once again recommend that a qualified plumber carry out the installation of this product.

Spanner

Silicone Sealant

Drill

Safety Glasses

Hacksaw

Pencil

Spirit Level

Basin Bolts Kit

PTFE Tape

Atlantic Close Coupled Cistern

Flush valve parts

Flush valve

Push button

Atlantic Close Coupled Cistern

Install the flap valve into the cistern, slide on coupling plate and tighten the back nut.

Place the Donut washer over the tail of the valve.

Locate the cistern onto the WC and tighten bolts to secure the cistern in place. Ensure that nuts are not overtightened as this could crack the ceramic.

When installing CC WC the correct mounting bush is the 90 degree component as shown left. No spacer is required.

FIRED EARTH recommends that the valve setting should be turned to maximum. This will ensure that the WC pan performs at its best by delivering the correct amount of water into the pan.

When attaching the chain ensure to the lever arm ensure that it is positioned directly above the flapper. The chain should have a slight slack when the flapper is closed.

NOTE: If the chain is too tight the flapper will stay open slightly and leak. If chain is too slack, it will not lift properly for a complete flush.

Atlantic Close Coupled Cistern

Installing a close-coupled toilet

Carefully measure and plumb in all necessary pipework prior to installing the toilet. Ensure that you have a clear space within which to work.

Ensure that the installation of flush and filling valve is complete as instructed, and that all fittings are tested and in working order.

Insert the cistern bolts and locate the cistern correctly onto the pan as shown below. Once correctly positioned tighten wing nuts to ensure a secure connection to the WC pan.

Once the cistern is secured to the pan offer the toilet up to the desired position. Ensure that the cistern sits flat against the wall and is level and the foot of the pan is perpendicular to the wall using a pencil to mark around the foot of the pan and the fixing holes in both foot and cistern.

Cistern fixing styles

Atlantic Close Coupled Cistern**Installing a close-coupled toilet (continued)**

Carefully measure and install all necessary pipework prior to installing the toilet. Ensure that you have a clear space within which to work. Remove the assembled toilet pan from the wall and drill the marked points. Insert the 8 x 60mm plugs for the floor fixing (solid floors only). Fixings for the cistern are not provided so please use suitable fixings for your wall type. Re-position the pan upto the wall and attach the waste pipe. Connect the water inlet pipe to the inlet valve. It may be advisable to use PTFE tape to help create a watertight seal between the inlet valve thread and the connecting nut. Secure the toilet pan to the floor/wall by using the fixings supplied/selected. It is advisable to run a bead of silicon around the joint between the WC outlet pipe and the waste pipe to ensure a good seal. Assemble the flush handle to cistern lid and place into position. Once you are satisfied that the pan has been installed correctly and the fixings are adequately tightened switch on the water supply to the inlet valve and once the cistern is filled operate the flush cycle.

Operate the flush cycle a few times and continually check carefully for signs of leaks from the inlet valve or toilet outlet if no leaks are evident, your toilet installation is complete.
